

KB2010: Show Search Results that are contained entirely WITHIN the Map Search Window.

This document explains when making a spatial search query, how to display results that are contained ENTIRELY WITHIN the map search window.

1. When a spatial search is executed, MAAD2GO will return catalog entries that fall WITHIN and that OVERLAP the defined spatial search extents map window (1).

2. To display only results that are contained entirely WITHIN the map windows, select the checkbox called "Find results contained within Map Window ONLY". MAAD2GO then only shows results that are fully contained within the map search window.

3. To display results that INTERSECT and ONLY WITHIN the map search window (the default criteria), unselect the checkbox.
